

Kay Containers discovers flexible reporting capabilities of Adagio

Kay Containers began in 1917 as the Winnipeg Cooperage Company, supplying wooden barrels to Winnipeg businesses. Now Kay Containers provides a large variety of packaging solutions from small paper bags to large steel drums.

Barb Wright chose Adagio for her accounting staff of eight after she attended a conference in Vancouver where the Adagio products were featured. "When I saw Adagio at a conference, I just thought it was so cool," she told us. "I just had to try it!"

And try it she did. Barb chose Adagio for all their accounting needs at Kay Containers. "I just love the software!" she said.

When asked what she likes best about Adagio, Barb said, "I really like the reports. It makes my life so much easier." Adagio offers many options for reports, including many pre-designed standard reports; plus, you can design your own using Adagio GridView or Crystal Reports for Adagio.

"I like being able to preview before I print the reports," Barb noted. "I probably use this feature hundreds of times in a day!" The print preview feature allows you to view a report on screen before printing it, to ensure that you've selected the data you want, and the correct report design and layout. You see the report on your screen exactly as it will be printed. This allows you to make adjustments to the report before you print the hard copy.

"When I saw Adagio at a conference, I just thought it was so cool. I just had to try it!"

Barb Wright, Kay Containers

"And I love that I can export any report into Excel," Barb added. "Just the other day, there was a problem with a balance and I just couldn't figure out what was wrong in the report. Then I realized that I can just export it to Excel, sort the report in any way I want, and there I could immediately see the problem."

Barb uses Adagio's SalesAnalysis module to print detailed reports for their sales team. Integrating seamlessly with Adagio OrderEntry and Adagio Invoices, SalesAnalysis captures critical sales information at the detail level to allow refined analysis. You can create comprehensive inquiries to look up sales by customer, item, salesperson or other fields, and display or print inquiry results in popular graph and chart styles. And of course, inquiry results can even be sent direct to Excel for further analysis.

And all this using Adagio's easy-to-use Windows interface. It's no wonder Barb is so excited about Adagio.
