

DataCare

Adagio DataCare automatically checks all your Adagio data, unattended! If you are running multiple Adagio modules, or working with multiple company data sets, Adagio DataCare will provide peace of mind and ensure the integrity of your accounting data.

- Set up DataCare once, and let it work its magic every night while your accounting staff are at home
- Opens and reads all your accounting data files, validates the information in the files, and creates a log of the work performed
- Define DataCare jobs, specifying the modules you want checked, and the tests you want performed
- Automatically back up your data prior to checking its integrity. Copy the backups to another directory too.
- Keep a log of all integrity checks performed, and their results
- Email any user, or group of users, on success or to alert them of failure of a job. Attach the results log to the e-mail for review.
- Use Windows' Scheduler to have Adagio DataCare run at night, when the accounting data files are not in use
- Have DataCare automatically run the rebuild function on any damage data it encounters
- DataCare can automatically compact files by removing deleted records to free up disk space and improve the overall responsiveness of your accounting system
- Automatically print the log, so it's available when you arrive at work in the morning

The company profile stores options available to be used when setting up your DataCare jobs.

Automatically make and copy backups, control which checks are performed and e-mail people on success or failure of the job.
